

Corner seals

The Loading Systems corner seals improve sealing to prevent draught at the bottom of the curtain dock shelters.

Features

- Available as traditional, trapezoidal or cylindrical model
- Easy to install
- The corner seals are supplied per pair and including mounting hardware

Application

The Loading Systems corner seals are applied to close the corner at the bottom sides of curtain dock shelters to prevent draught.

The corner seals are available in two different models and in many different sizes. A corner seal can also be precisely tailored to customer needs. Therefore a corner seal is available for every application.

Materials

The corner seals are made of foam blocks with a strong cover, which is made of polyester fabric with a PVC top coating. By using quality foam, the corner seals return in their original shape after use.

The corner seals are easy to install.

Trapezoidal model

The trapezoidal corner seal is often used in combination with the curtain dock shelters.

The corner seals are supplied per pair and including mounting hardware.

Article number	Length (mm)	Width (mm)	Height (mm)
941-454	600	300	100
941-455	600	370	100
941-456	600	520	100
941-470	900	370	100
941-471	900	520	100

Cylindrical model

The cylindrical corner seal can be used in combination with the curtain dock shelters. This model is particularly applicable if the bottom of the dock shelter is flush with the loading platform.

The corner seals are hang to the top frame of a dock shelter using a flexible spring.

The corner seals are supplied per pair and including mounting hardware.

Article number	Diameter (mm)	Height (mm)
